PROFILE

Product designer and Human-Centered Computing M.S. candidate who translates qualitative research into accessible, user-centered digital experiences. Skilled in UX research, interaction design, wireframing, prototyping, and cross-functional collaboration, with a strong visual foundation in design and merchandising. Uses AI-assisted tools to accelerate research synthesis, explore design directions, and iterate prototypes while applying human-centered judgment to validate usability, accessibility, and alignment with user needs.

EDUCATION

University of Maryland, Baltimore County (UMBC) M.S. in Human-Centered Computing	Baltimore, MD Expected May 2027
Dongduk Women's University B.F.A. in Craft Arts	Seoul, South Korea
